PEST CONTROL

**PIONEERING SUSTAINABLE
PEST SOLUTIONS**

Rodent Management Program Update – Residential

Due to recent updates introduced by the Australian Pesticides and Veterinary Medicines Authority, we've enhanced our rodent management program to not only remain fully compliant, but to deliver an even higher standard of care, safety, and effectiveness for your home.

At Laguna Pest Control, our priority is simple – effective results, with the safest possible approach for your family, pets, and the environment.

What This Means for You

Rather than a “set and forget” approach, your rodent management program is now more proactive, closely monitored, and results driven.

This ensures

- Faster control of active rodent issues
- Reduced risk of reinfestation
- Safer long-term solutions once control is achieved

Our Proven Process

Thorough Initial Inspection

We start by understanding exactly what's happening at your property.

During this visit, we will

- Identify rodent activity and nesting areas
- Provide practical recommendations (hygiene, proofing measures, and rectification of conducive conditions, Address contributing factors around your home)
- Determine the most effective treatment approach for your situation

PIONEERING SUSTAINABLE PEST SOLUTIONS

Targeted Treatment & Active Monitoring

Where required, we may use high-strength (second-generation) baits to quickly bring active infestations under control.

To meet new legislation and more importantly, to ensure the best results we return every 4 weeks to

- Monitor activity levels
- Adjust the program as needed
- Ensure the treatment is working effectively

This hands-on approach allows us to stay ahead of the problem, not just react to it.

Safer Long-Term Protection

Once activity has been reduced to a satisfactory level:

- Stronger baits are removed
- We transition to a lower-toxicity, environmentally responsible solution
- Your warranty period begins from this point

Why This Is a Positive Change

While the legislation requires more frequent checks, it actually delivers better outcomes for you

- More effective control
- Less reliance on high-toxicity products long term
- Greater protection for pets, wildlife, and your family
- Ongoing peace of mind knowing your home is being actively monitored

In Simple Terms

We use stronger treatments to quickly get on top of the problem – then switch to safer options once control is achieved, all while keeping a close eye on things every step of the way.
